Typically, the process of converting DVD to Kindle Fire comprises of two parts with two single tools required. Step 3: Set output subtitle language (if available), format, video/audio quality, and output folder.

Click the folder icon on the right-hand of "Output" label to customize the output folder. Never locate the output folder as your Kindle Fire drive (if you have plugged your Kindle Fire to the computer), or the program will occupy more resources and take longer time to write the output file to an external storage.

Step 4: Rip DVD. Click the round **convert button** in the lower right corner to start the ripping. The ripping process may take dozens of minutes or more than an hour, which completely depends on the original size and the output quality.

When the ripping is done, the progress bar will show "Finished" (100%). Click
