

Is KEEPVID Safe? 4 Things about KEEPVID.

Is KeepVID safe? Is KeepVID legal? How does KEEPVID work and what are good KEEPVID alternatives? This guide will explain these things to you.

KEEPVID is a popular online YouTube video downloader as well as converter allowing people to download and save streaming videos to computer. As a result, people are able to enjoy downloaded videos fluently without relying on the Internet connection. In addition, once the videos are converted to MP4, they can be transferred to iPad, iPhone, Kindle Fire HDX, Nexus 7 or other mobile devices for offline watching.

On the surface, people only need to input a video URL and click download button to get a video downloaded on KEEPVID.com, but it is not that easy in fact. The constantly emerging pop-ups, security warnings and handy ads confuse users seriously. Many times, users find KEEPVID not working at the first shot. 4 things about KEEPVID below will help you know more about KEEPVID.

- [1. Is KEEPVID safe?](#)
- [2. Is KEEPVID legal?](#)
- [3. How does KEEPVID work?](#)
- [4. The best KEEPVID alternative](#)

1. Is KEEPVID safe?

KEEPVID itself is a safe site exclusively providing free YouTube/video downloading. However, the downloading process requires Java installation, which comes in the form of pop-up and thereby reminds users of malware or virus. Java Applet is not malicious, too, but Java installation always comes along with useless tool bars or ads. In addition, there will be security warnings popping every time Java applet loads videos. If you prefer a more reliable way to download YouTube videos, you can consider [KEEPVID alternative sites or tools](#).

2. Is KEEPVID legal?

KEEPVID is legal itself. The legality issue depends on how you use downloaded videos from KEEPVID. Since millions of people around the world watch online

videos every day, a lot of them download online videos to computer in the meantime. It will be OK if you only download the videos for personal use. For commercial purchases or online distribution, you have to figure out whether the video/movies are under copyright or allowed free distribution. If you copy or distribute video content that is copyright protected, that will be illegal.

3. How does KEEPVID work?

KEEPVID requires the installation of Java, or there will be no way to rip videos off YouTube or other video-sharing sites. KEEPVID supported sites include: YouTube, MetaCafe, Dailymotion, Vimeo, zShare.net, 4shared, 5min, 9you, AlterVideo.net, Aniboom, blip.tv, Break, Clipfish.de, Clipser, DivxStage.eu, RuTube, SoundCloud, Stagevu, TED, Tudou, TwitVid, VBOX7, videobb, VideoWeed.es, Veoh, etc. [Refer to this tutorial to download YouTube videos free with KEEPVID.](#)

4. The best KEEPVID alternative

Sites similar to KEEPVID are **SAVEVID**, **ClipNabber** and **Deturl.Com**. Just like KEEPVID, these sites require Java plug-in installation, fill with ads, and appear less secure. The best KEEPVID alternative I would recommend to you is an independent tool, imElfin [YouTube downloader](#). While online YouTube downloader sites relate a lot with browsers, this program is separate from browsers, does not require a Java applet, and will not risk your computer at all.

Download YouTube videos

The built-in **YouTube downloader accelerator** enables you to download YouTube videos or other online videos faster than general online downloaders. Input the URL as you do on browser, there will be a download prompt displayed on your computer. Choose the output format as per the output device you will watch the YouTube videos on. HD YouTube video download (1080p) are supported as well. Apart from YouTube, **videos from all other online video streaming sites can be downloaded** to your Mac or PC as long as you input the URL.

Output devices supported by imElfin YouTube Downloader

The screenshot shows a software interface for video conversion. On the left, a vertical list of output devices is shown, with 'iPad' selected. On the right, three video profiles are listed for the iPad: 'iPad H.264 Video(768x576) (*.mp4)', 'iPad HD Video(1280x720) (*.mp4)', and 'iPad MPEG-4 Video(640x480) (*.mp4)'. Below this, the 'Save as:' section shows the output format set to 'MP4-MPEG-4 Video (*.mp4)'. The 'Video Quality' and 'Audio Quality' are both set to 'Medium Quality'. The 'Folder' field is set to 'C:\Users\... \Documents\Imelfin\Youtube Export\'. A red arrow points to the 'MP4-MPEG-4 Video (*.mp4)' format. A red text box at the bottom left says 'Set the output device to hold the downloaded videos.' and a blue circular refresh button is on the right.

Set the output device to hold the downloaded videos.
